

AlejTech Intranet

Intranet solutions help customers capture, share and reuse information circulating throughout the company.

Your intranet will introduce new standards and work efficiency in your corporation.

Alejtech Intranet - a complex solution for your business

AlejTech Intranet is an ideal platform for effective management of your internal corporate processes and data flows.

AlejTech Intranet can be accessed anywhere and provides its users with an opportunity to comfortably assign work tasks and monitor their implementation, create projects, share documents, create invoices and generate statistics and reports.

In addition, we will gladly program any specific functionality you may require.

Flexibility with Alejtech Intranet

AlejTech Intranet is a custom flexible solution designed to help companies with their task management and workflow.

A powerful document management and sharing system enables the intranet users to distribute documents and information within the company using specific user roles and permissions.

If you are looking for a more complex solution, check out our powerful customer relation system AlejTech CRM, built upon Alejtech Intranet.

AlejTech Intranet Features

System AlejTech Intranet includes all the features you may need to manage your business processes, whether it's task assignment, contact databases, tracking worksheets, publishing and sharing documents, or billing and invoices.

User database

The database enables intranet users to define user permissions and roles of each user.

Clients' and partners' database

Allows processing and archiving all contacts of companies and individuals identified by flags, assigning them to documents, projects and cases.

Projects / products database

Allows users to create projects (products), assign documents, set up contacts, set project status (completed, current,..), assign employees to projects, follow work reports, and cost summaries, etc.

Timesheets, work reports

Enables work reports for individual projects, archives of finished tasks and all user contributions within the tasks, sorting by task types, detailed records of hours worked, etc.

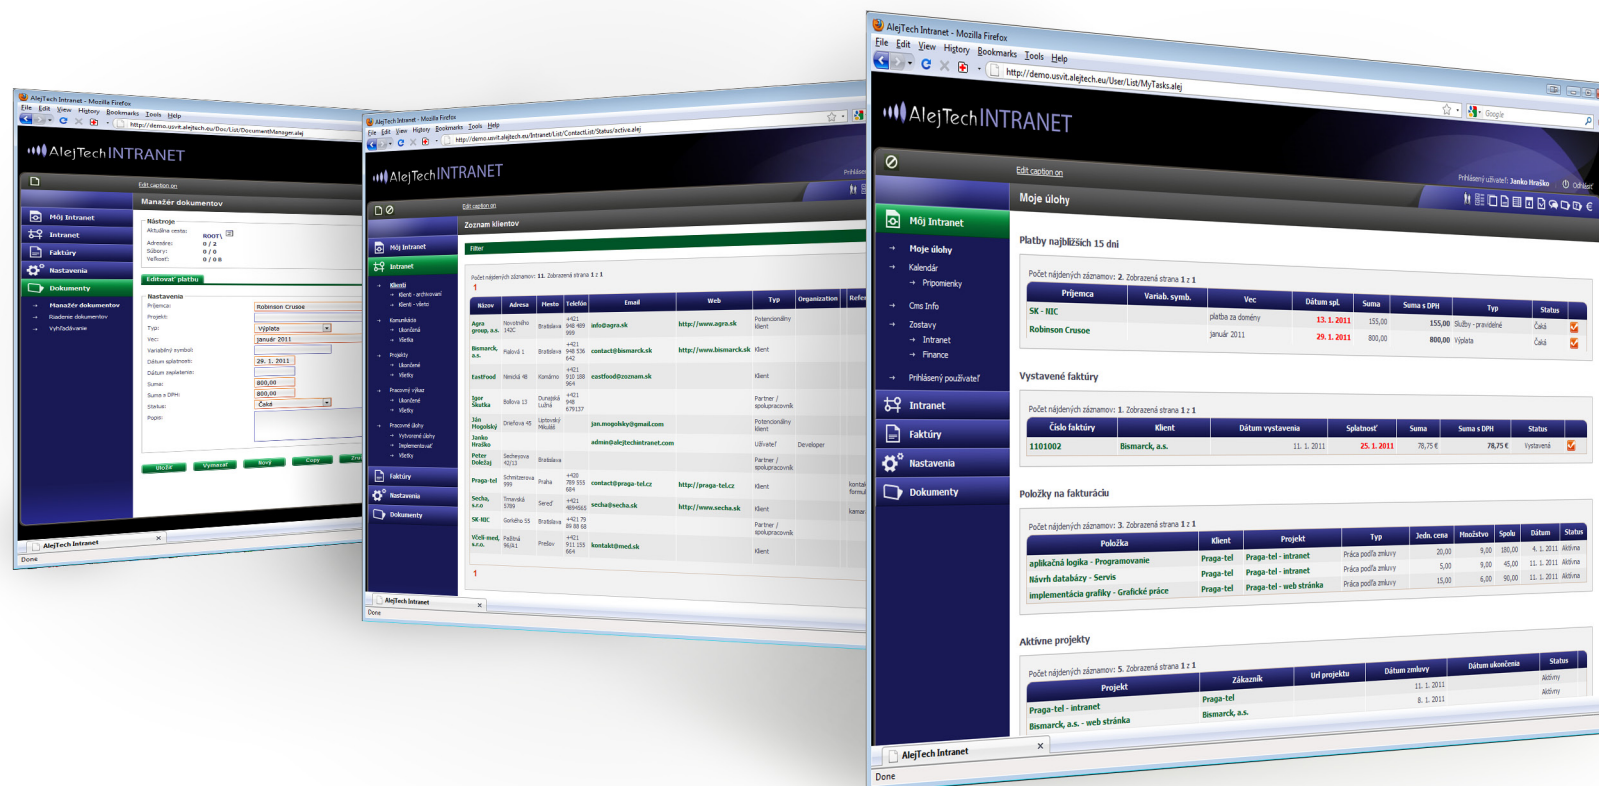

Tasks allocation

Allows users to assign roles to employees under existing open projects, track statuses of development tasks and recent changes, share tasks among multiple employees, track job history, assign documents to tasks, track cost overruns and time overruns, etc.

✓	Comments and calendar	Provides tools to send comments, save worksheets and tasks in a complex calendar, manage and report tasks.
✓	Document management system	Serves users as a platform for document sharing, storing versions of documents with customizable user permissions. A full-text search in documents is provided.
✓	Billing	Automatic creation of recurring billing items, sending PDF invoices by e-mail, sending automatic reminders for outstanding invoices.
✓	Payment monitoring	Allows to record and archive payments, offers a breakdown by type of payment, payment tracking and payment statuses, etc.
✓	Configurations	Offers system reports for analysis and data export to Excel, the possibility of defining new reports using SQL administration.
✓	Content publishing	Publication of directives, regulations, news, etc.
✓	Database filtering, views	All records in the intranet can be filtered by all record details. The amount and arrangement of data displayed for tasks, contacts and accounts can be changed for individual users.
✓	Graphics intranet corporate colors	We can provide the intranet graphics in corporate colors upon request.

Be effective with AlejTech Intranet

AlejTech Intranet allows you to effectively manage processes in your company. Provides immediate access to information for users with various levels of user privileges. Ensures a smooth and up to date data sharing.
